

TREATMENT OF CONDITIONS THROUGH PHARMACOLOGICAL MODULATION OF THE AUTONOMIC NERVOUS SYSTEM

ABSTRACT OF THE DISCLOSURE

[00198] Methods are provided for treating a subject for a condition caused by an abnormality in the subject's autonomic nervous system. In accordance with the subject methods, at least a portion of a subject's autonomic nervous system is pharmacologically modulated with at least one beta-blocker in a manner that is effective to treat the subject for the condition. The subject methods find use in the treatment of a variety of different conditions, where such conditions include various disease conditions. Also provided are systems and kits for use in practicing the subject methods.
